LIPOSCULPTURE

PROMELTER
HD

DEFINE YOUR BODY
SCULPT YOUR DESIRES
LOVE YOUR CURVES

A UNIQUE TECHNOLOGY FOR REDEFINING THE BODY
PRECISE, EFFICIENT AND MINIMALLY INVASIVE.

PROMELTER HD IS THE NEW EQUIPMENT BORN FROM PROMOTALIA RESEARCH USING
AUTOCALIBRATING SINUSOIDAL ULTRASOUND WAVES ABLE TO EMULSIFY ADIPOSE TISSUE
RESPECTING SURROUNDING STRUCTURES.

A PARTICULAR AND TARGETED EFFECTIVENESS THAT ALLOWS TO GENTLY AND PRECISELY REMOVE
FAT DEPOSITS WITHOUT DAMAGING BLOOD VESSELS AND DERMAL TISSUE.

PROMELTER HD USES A NEW METHODOLOGY CONSISTING OF INTRADERMAL ULTRASOUND
EMISSION, CALIBRATED FROM TIME TO TIME DEPENDING ON THE ADIPOSE TISSUE IT ENCOUNTERS.

A SPECIFIC METHODOLOGY FOR THE PATIENT, A MIX OF VARIABLE FREQUENCIES DEPENDING ON
THE TEXTURE AND TYPE OF TISSUE TREATED.

INDICATIONS:

- HIGH EFFECTIVENESS
LIPOSCULPTURE AND DEFINING
BODY CONTOURS
- ELIMINATION OF FIBROUS
CELLULITE

PROMELTER HD IS EQUIPPED WITH TWO SPECIFIC PROBES: FOR THE TREATMENT OF THE
INDICATIONS DESCRIBED, THE CANNULAS OF HIGH QUALITY SURGICAL TITANIUM EMIT ULTRASOUND
ONLY IN THE TERMINAL PART, WHILE THEIR ROUNDED SHAPE ALLOW AN ATRAUMATIC TREATMENT
OF THE TARGETED TISSUE.

THE ULTRASONIC WAVE EMISSION IS CONTINUOUSLY CALIBRATED ACCORDING TO THE STRUCTURE
OF THE FAT AND OF THE TISSUES WITH WHICH THE CANNULA IS IN CONTACT WITH. IN THIS
MANNER NO OVERHEATING AND MELTING OF ACCUMULATED TRIGLYCERIDES OCCURS.

THE COLD LIPOEMULSION GENTLY REMOVES FAT DEPOSITS WITHOUT DAMAGING THE
SURROUNDING STRUCTURES.

THE ASPIRATION OF EMULSIFIED FAT IS NOT NECESSARY.
